

THOMSON REUTERS C-TRACK BREACH

\$10,000 Executive Intelligence Brief

One-Time Deliverable — Confidential

Field	Detail
Classification	CONFIDENTIAL — Buyer Use Only (Defense Counsel / Crisis PR / Cyber IR–MSSP)
Brief date	2026-09-03 Pacific Time (PT)
Edition	WIMPY_EDITION
Prepared for	Law firms (defense & specialty privacy), crisis communications agencies, cyber incident-response / MSSP practices
Product type	One-and-done executive intelligence brief — no refresh window, no monitoring subscription, no update SLA
Composite triage score	85/100 (prior lead triage: high commercial urgency on public-disclosure day; multi-jurisdiction sealed-data vendor SaaS event)
Trigger	Coordinated public notices (Ontario chief justices; US court / West Publishing notifications; Oregon OJD) around [REDACTED] [REDACTED] PT; citizen contact center scheduled active [REDACTED]

Company Snapshot (Thomson Reuters Corporation)

Item	Publicly reported fact
Issuer	Thomson Reuters Corporation (Nasdaq / TSX: TRI)
FY2025 revenue	\$7.476 billion (company IR Q4/FY2025 release)
Legal Professionals FY2025 revenue	[REDACTED] (–2% reported; +8% organic per IR tables)

Item	Publicly reported fact
President & CEO	Steve Hasker
President, Legal Professionals	[REDACTED]
Chief Legal Officer / Company Secretary	[REDACTED]
Head of Investor Relations	[REDACTED]
C-Track operator (US notices)	West Publishing Corporation (d/b/a Thomson Reuters / Thomson Reuters Court Management Solutions)
C-Track operator (Canada notices)	Thomson Reuters Canada Limited

How to use this brief. This is a paid, self-contained commercial intelligence product. Facts are drawn from public notices and reputable reporting cited in §12. Where volume, vector, attacker identity, SEC/SEDAR current-report status, or post-brief filings are unknown, they are labeled **UNKNOWN** or **UNCONFIRMED**. Do not treat any estimate herein as a substitute for primary-source verification before client advice, filings, or public statements.

1. Executive Summary

The commercial window that matters for buyers of this brief is not the [REDACTED] intrusion date. It is the **first 24–48 hours of public disclosure** — roughly [REDACTED] through [REDACTED] Pacific Time — when court systems, Thomson Reuters (TR), Ontario’s Ministry of the Attorney General (MAG), and trade/cyber media simultaneously surface a multi-jurisdiction compromise of **C-Track**, a court case-management platform operated by TR subsidiaries. In that window, defense counsel, crisis PR shops, and cyber IR/MSSPs are competing for the same buyers: TR’s legal and communications leadership; general counsel and CIOs of named judicial branches; Ontario MAG stakeholders; insurers and brokers reassessing vendor-cyber coverage; and plaintiffs firms scanning for standing-ready class representatives.

What is publicly known. West Publishing / C-Track states that on [REDACTED] [REDACTED] it discovered unauthorized third-party activity involving certain C-Track

information; an investigation with outside cybersecurity experts and law enforcement concluded that in [REDACTED] an unauthorized party obtained certain C-Track files associated with a long list of court systems in the United States, the U.S. Virgin Islands, and Ontario, Canada. Affected records may include names plus one or more of: [REDACTED], driver's license number, [REDACTED], [REDACTED], and health insurance information. U.S. notices expressly state that **confidential, redacted, or sealed** information may have been impacted for certain courts. TR and court statements emphasize that the incident was **not caused by the courts' own networks, systems, or data security**, that **C-Track remains operational**, that there is **no evidence to date of fraud or misuse**, and that **financial-transaction systems** were not shown to be affected. Affected individuals are being offered **12 months** of complimentary credit monitoring and identity-theft protection: **U.S.** — [REDACTED], multiuse enrollment code [REDACTED], enroll by [REDACTED] (via <https://www.ctracknotification.com/>); **Canada** — TransUnion [REDACTED] (via <https://www.ctracknotification.ca/> enrollment details pending call-centre go-live). The dedicated U.S. hotline is [REDACTED], engagement [REDACTED]. Ontario's three chief justices state that a Canadian call centre was scheduled to become active [REDACTED].

Vendor-versus-court liability split. The dominant liability narrative — already adopted in TR notices, Oregon OJD messaging, Ontario's joint chief-justices statement, and insurance-trade commentary — is that this was a **vendor/cloud environment event**, not a compromise of court-owned edge networks. That framing is commercially decisive: it pushes primary security-practice scrutiny toward West/TR while leaving courts exposed on **notice timing, contractual diligence, sealed-record stewardship, and public confidence**. Insurance Business and similar coverage have already framed the event as a reminder that litigants' data sat with a vendor many victims never chose. Buyers advising courts should prepare for **indemnity and notice-cost allocation** fights; buyers advising TR should prepare for **negligence / consumer-protection / unfair-practices** theories plus reputational pressure from judicial leadership.

Sealed-data angle. Ordinary consumer-breach playbooks undervalue sealed and confidential court material. Exposure of sealed filings converts a "credit monitoring" story into a **judicial-integrity and victim-safety story** — protective-order content, juvenile or sensitive proceedings, medical exhibits,

and redacted identifiers. Oregon Chief Justice [REDACTED] publicly called a vendor breach of this nature [REDACTED] which is already the headline quote crisis teams must handle. Nevada officials (per The Record) have cautioned that data types **vary by jurisdiction**, which cuts both ways: it undercuts one-size-fits-all scare narratives *and* forces court-by-court scoping that plaintiffs will exploit.

Speed-to-lead for buyers. As of this brief date ([REDACTED] PT), open-source monitoring has **not** surfaced a widely reported, named consumer class action caption against TRI/West over C-Track. That is a **speed-to-file / speed-to-retain window**, not a prediction that none will be filed. Parallel tracks that matter commercially within days: (1) plaintiffs privacy filings; (2) court demand letters and contract claims; (3) state AG / Canadian privacy inquiries; (4) securities disclosure questions for a dual-listed issuer (see §6 — **no confirmed [REDACTED] 8-K located as of brief date**; TRI is generally a [REDACTED] filing [REDACTED], so counsel must verify the correct regime rather than assume domestic 8-K [REDACTED] mechanics).

Known vs unknown (executive cut). Known: March access window → [REDACTED] discovery → July private notices to at least some courts/MAG → early-September public cascade → [REDACTED] contact-center activation; named jurisdiction list in §3; data categories in §4; ops-continuity and “no fraud evidence” statements. **Unknown / unconfirmed:** attacker identity and motivation; initial access vector; exact record counts and unique-person counts; full sealed-record inventory; whether every affected jurisdiction is yet named; whether any SEDAR/SEC current report specifically addresses materiality of this incident; whether class actions have been filed after this brief’s freeze date. Flagging those gaps is part of the product’s integrity — and part of why sophisticated buyers pay for disciplined intelligence rather than recycled news wires.

Commercial thesis in one sentence. A publicly trusted legal-information giant’s court CMS was accessed for months; sealed and high-sensitivity personal data across a dozen-plus North American court systems may be in play; the vendor owns the security narrative while courts own the public-trust narrative; and the first firms that can brief boards, draft messaging, and scope IR retainers **today** will own the workstreams that follow.

2. Incident Narrative & Timeline

2.1 Narrative arc

C-Track is a court case-management / e-filing oriented platform used by appellate and other courts to store and manage case documents and related records. Public notices attribute operation to **West Publishing Corporation** (US) and **Thomson Reuters Canada Limited** (Ontario). The platform is repeatedly described as **cloud-hosted** in Oregon and Ontario materials; Ohio's Supreme Court notice adds an important local nuance that its appellate C-Track instance is **hosted by the [REDACTED] and managed by TRCMS**, with TRCMS later telling the Court that unauthorized access occurred on the Court's [REDACTED] serving [REDACTED]. Buyers should treat hosting topology as **jurisdiction-specific** and verify before asserting a single "TR cloud only" fact pattern for every named court.

According to the West/C-Track public notice reproduced by North Dakota courts and mirrored on [REDACTED], C-Track discovered unauthorized third-party activity on [REDACTED], launched an investigation with third-party experts and law enforcement, and contained/secured the environment. The investigation found that in [REDACTED] an unauthorized party obtained certain C-Track files associated with the court systems listed in §3. Montana Chief Justice materials (via KTVH) state TR confirmed an unauthorized-access window of [REDACTED] for Montana C-Track / e-filing **backup** data, implying dwell until discovery — TR's broader public language still says files were obtained "in [REDACTED]," and TR has not published a granular dwell forensic narrative for the public.

2.2 Detailed timeline (public sources)

When (approx.)	What (sourced)
[REDACTED]	Unauthorized party obtains certain C-Track files associated with named court systems (West/C-Track investigation finding; ND notice; Help Net Security; The Record).

**When
(approx.)**

What (sourced)

[REDACTED]
[REDACTED]
[REDACTED]

Montana: TR-confirmed unauthorized access window to TR storage of MT C-Track / e-filing **backup** data (Montana CJ via KTVH). Exact continuous-presence forensics for all other courts: **UNKNOWN publicly**.

[REDACTED]

TR/C-Track discovers unauthorized activity involving certain C-Track information; engages outside cyber experts and law enforcement; begins containment (company notices; Ontario chief justices).

[REDACTED]

TR advises Ontario MAG that accessed data included some Ontario court information (Ontario chief justices' [REDACTED] statement). Same date cited for notice to Montana's court administrator (The Record).

[REDACTED]

[REDACTED] notified by West/TRCMS of the cybersecurity incident involving C-Track (Ohio Court public statement).

[REDACTED]

Ohio Court notifies the ten relevant courts of appeals (Ohio Court statement).

[REDACTED]

TRCMS informs Ohio Court that unauthorized access took place on the Court's [REDACTED] hosting filings for the ten C-Track-using districts (Ohio Court statement).

**Summer
2026 (Jul–
Aug)**

Private investigation, court notifications, and scoping continue; public remains largely unaware. Exact date every listed court learned: **UNKNOWN** court-by-court.

[REDACTED]

Public cascade: Ontario three chief justices' public statement; Oregon OJD press release with Chief Justice Flynn quote; West/C-Track website and media notices (ND, SC, and others republish).

[REDACTED]
[REDACTED]

Broader US cyber/legal press (Help Net Security, The Record, ABA Journal/Law360 summaries, Insurance Business, TechNadu, others) amplifies blast radius and sealed-data themes.

[REDACTED]

Dedicated contact-center / Canadian call-centre activation window per Ontario statement and multi-source reporting; US hotline already published with engagement [REDACTED].

2.3 Judicial and company voice (verbatim themes)

Oregon — Chief Justice [REDACTED] (OJD, [REDACTED]): After stating the Judicial Branch's primary concern for people who appear before the courts and the security of their information, Flynn said: [REDACTED]

[REDACTED] OJD stressed that circuit courts and the Tax Court were **not** involved, that daily statewide court operations were **not** impacted, that OJD has been [REDACTED] [REDACTED] from Thomson Reuters, and that exact data involved remained unclear pending further TR detail.

Ontario — Chief Justices [REDACTED], [REDACTED], and [REDACTED] (joint statement, [REDACTED]): Confirmed C-Track use by the [REDACTED], [REDACTED], and Court of Justice; described [REDACTED] detection in a TR cloud environment; noted MAG notice on [REDACTED]; stated it remains unclear exactly what information was compromised or how many people were affected; warned that persons involved in proceedings or mentioned in documents may have personal information implicated; affirmed no evidence to date of identity theft; affirmed no indication financial-transaction systems for court proceedings were affected; affirmed C-Track remains operational and safe to use; committed to transparency and collaboration with Ontario's Cyber Security Division.

Thomson Reuters / West / C-Track (public notices and spokesperson lines reported by ABA Journal, TechRadar, Manila Times, etc.): No operational disruption; products remain fully operational and safe to continue to use; independent cybersecurity experts assisted and validated remediation measures; incident not caused by courts' networks/systems/data security; no evidence of fraud/misuse to date; 12 months credit monitoring offered.

2.4 Analytical read for buyers

The timeline creates three distinct pressure points. First, the **multi-month gap between access and discovery** (March → [REDACTED]) is the forensic and negligence magnet. Second, the **gap between discovery and public notice** ([REDACTED] → early September), with some courts/MAG notified in late July, is the **regulatory notice-clock and public-trust** magnet — especially where sealed data is implicated. Third, the [REDACTED] **public and contact-center surge** is the **business-development magnet** for this brief's buyers. Counsel

and PR teams that wait for a complete record-count disclosure will lose the narrative to whoever briefs first with disciplined known/unknown framing.

3. Blast Radius — Court-by-Court Tracker

Scope caveat: Help Net Security and court notices warn that the list has expanded as individual courts disclose; **the full jurisdiction list may still be incomplete. Oregon list discrepancy:** [REDACTED] are **court-confirmed** (OJD [REDACTED] release) and appear on some West statement variants (ND Courts republish; SC Judicial Branch PDF attachment) but were **not always present** on the live <https://www.ctracknotification.com/> HTML as of dossier fetch — treat Oregon as affected; flag notice-list versioning. [REDACTED] **is Pennsylvania** (primary West/C-Track list; ABA Journal/Law360); Help Net Security's "Ohio" parenthetical is an **error** — do not repeat it. **Minnesota** and [REDACTED] have **self-disclosed** impact but may be **absent from the live US bullet list** on [REDACTED] — confirm inclusion status with TR (see §13).

Jurisdiction	Court type	Public notice status (as of brief date)	Special notes
[REDACTED] [REDACTED] [REDACTED]	Provincial appellate	Joint chief justices statement [REDACTED] [REDACTED]	[REDACTED] [REDACTED] [REDACTED] [REDACTED] [REDACTED]
[REDACTED] [REDACTED] [REDACTED]	Superior trial	Same	[REDACTED] [REDACTED] [REDACTED] [REDACTED]
[REDACTED] [REDACTED]	Provincial court	Same	Same uncertainty language on content/person counts
[REDACTED] [REDACTED] [REDACTED]	State appellate	Named in West/C-Track notice	Data categories may vary by court

Jurisdiction	Court type	Public notice status (as of brief date)	Special notes
[REDACTED]			
[REDACTED]	Trial (Common Pleas)	Named in West/C-Track notice	Pennsylvania (not Ohio — Help Net Security mislabel)
[REDACTED]			
[REDACTED]			
[REDACTED]	Trial (Common Pleas)	Named	Explicitly Pennsylvania
[REDACTED]			
[REDACTED]	PA judicial district	Named	Local/trial footprint
[REDACTED]			
[REDACTED]	State appellate	Named	—
[REDACTED]			
[REDACTED]			[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]	State high court	Named; additional local commentary via press	[REDACTED] [REDACTED] [REDACTED] [REDACTED]
[REDACTED]			
[REDACTED]	State appellate	Named	Officials cautioned data types vary by jurisdiction (The Record)
[REDACTED]			
[REDACTED]	State high court	Named; ND courts host incident page	Republishes full C- Track list + hotline
[REDACTED]			
[REDACTED]	State high court	Named; SC Judicial Branch PDF statement	Mirrors West notice language
[REDACTED]			
[REDACTED]	Intermediate appellate	Named	Same
[REDACTED]			
[REDACTED]			

Jurisdiction	Court type	Public notice status (as of brief date)	Special notes
[REDACTED]	Appellate clerk function	Named	[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]	State high court	Named	—
[REDACTED]			
[REDACTED]	Intermediate appellate	Named; Ohio Supreme Court substitute notice	[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]	Territorial	Named	[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]	Entire state court system	Named	[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]	Administrative board	Named as former client	[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]	State appellate	OJD press release [REDACTED]; on ND/SC West-statement variants; not always on live [REDACTED] HTML	[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]	State appellate + executive- branch tribunals	Self-disclosed (CBS Minnesota / FOX9); may be absent from live TR US bullet list	[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]			[REDACTED]

Jurisdiction	Court type	Public notice status (as of brief date)	Special notes
[REDACTED]			[REDACTED]
[REDACTED]			[REDACTED]
			[REDACTED]
			[REDACTED]
[REDACTED]			[REDACTED]
[REDACTED]		Self-disclosed PDF	[REDACTED]
[REDACTED]		press release [REDACTED]	[REDACTED]
[REDACTED] (Court of Local	Local	[REDACTED]; may be absent	[REDACTED]
Appeals &	appellate/trial	from live TR US bullet	[REDACTED]
Superior Court		list	[REDACTED]
referenced)			[REDACTED]

Commercial implication: Wyoming's entire judicial branch and Ontario's three major courts create headline gravity; Ohio's ten-of-twelve appellate districts create a large Midwestern class-representative pool; Pennsylvania's mix of trial, district, and former-client board entities creates messy contractual maps; Oregon supplies the sharpest judicial condemnation quote in the open press; Minnesota's backup-user-data / terminated-access response and DC's self-disclosure expand the blast radius beyond TR's fixed bullet list.

4. Data Exposure Analysis

4.1 Categories disclosed by West/C-Track

Public U.S. notices state that a **subset** of court records were affected, some of which could potentially contain individuals' **names** and possibly one or more of the following:

- [REDACTED]
- [REDACTED]
- [REDACTED]
- [REDACTED]
- [REDACTED]

Separately, notices state that **certain confidential, redacted, or sealed information may have been impacted for certain affected courts.**

4.2 Variability and sealed/redacted language

Exposure is **not** described as uniform. Nevada's caution (via The Record) that data types vary by jurisdiction is consistent with how CMS platforms store mixed public docket text, party identifiers, and restricted filings. Montana commentary suggesting much affected information was already public, with some DL/DOB also involved, illustrates the same point: plaintiffs will plead the **worst available category in any jurisdiction**, while defense will insist on **court-specific inventories**.

Sealed/redacted/confidential language is the differentiator versus a routine SaaS HR or e-commerce breach. Even if the majority of bytes are public docket content, a non-zero sealed set can dominate reputational harm, judicial anger, and settlement leverage — especially where protective orders were meant to keep medical, juvenile, or safety-sensitive material from public view.

4.3 Downstream victims with no commercial relationship to TRI

Insurance Business and parallel analyses correctly stress that many potentially affected persons — litigants, witnesses, victims, persons merely **mentioned** in filings — never contracted with Thomson Reuters and never chose C-Track. Ontario's chief justices explicitly include persons "mentioned in court documents." That third-party-victim structure complicates standing, damages, and insurance response, and it expands the universe of sympathetic plaintiffs beyond TR enterprise customers.

4.4 What TR says was *not* hit

- **No evidence to date** of fraud or misuse of exposed information (company notices; Ontario statement on identity theft).
- **No evidence** that systems used to process **financial transactions** were impacted.
- **No operational disruption** to C-Track; platform stated safe to continue to use after added security measures reviewed/approved by outside experts (experts not publicly named — **UNKNOWN identity**).

4.5 Record count

UNKNOWN. Neither West/C-Track nor Ontario courts have published a verified unique-person count or record-volume figure as of this brief date. Absence of a count is itself a litigation and notice-compliance pressure point: regulators and courts will demand progressive quantification; plaintiffs will allege concealment until numbers appear.

4.6 Credit monitoring & enrollment (as published)

Region	Offer	Enrollment / codes	Sites
United States	12 months	Multiuse code	
	[REDACTED]	[REDACTED];	
	[REDACTED]	enroll by

	[REDACTED]	centre live	
		([REDACTED]	
		[REDACTED] per Ontario	
		CJ)	

5. Company & Product Context

Thomson Reuters Corporation is a dual-listed (Nasdaq/TSX: **TRI**) professional-information company. FY2025 continuing-operations revenue was **\$7.476 billion** per the company’s fourth-quarter and full-year 2025 results release; **Legal Professionals** reported [REDACTED] (–2% reported; **+8% organic**). Management highlighted Legal Professionals and related “Big 3” organic growth narratives on the February 2026 earnings call. Leadership publicly

associated with this brief's outreach map includes CEO **Steve Hasker**, President of Legal Professionals [REDACTED], CLO [REDACTED], and IR head [REDACTED].

C-Track sits in the court technology / case-management lane associated with West Publishing and TR's court-management solutions branding — e-filing support, docket and document management, and cloud-delivered CMS functionality for judicial customers. Oregon describes C-Track as the cloud-hosted CMS for its Court of Appeals and Supreme Court. Ontario describes it as storing and managing some court documents and records for three major courts. Ohio describes a TRCMS-managed appellate CMS used by ten districts, hosted on a Court [REDACTED].

Why court digitisation concentration risk matters. When multiple sovereign court systems concentrate sensitive filings onto a common vendor platform, a single vendor security failure becomes a **systemic justice-system event**. That concentration is exactly what converts a product IR ticket into AG attention, chief-justice press conferences, and multi-district plaintiff coordination. For TRI commercially, C-Track may be a modest revenue line relative to \$7.5B group revenue (**segment breakout for C-Track alone: not broken out in sources used here — UNKNOWN**), but reputational spillover into Legal Professionals trust is the larger franchise risk.

6. Regulatory & Enforcement Matrix

6.1 United States — multi-state breach notification

Named US states and the USVI trigger a patchwork of breach-notification statutes with differing definitions of personal information, risk-of-harm thresholds, timing clocks, AG notice triggers, and substitute-notice rules. Ohio's Supreme Court expressly framed its web posting as **substitute notice under** [REDACTED] while investigation continues — a signal that courts themselves are navigating controller/co-controller notice duties even when the technical incident is attributed to the vendor. Defense counsel for TR and for courts should build a **jurisdiction-by-jurisdiction notice matrix** (AG letters, consumer notice, media notice, tolling facts) rather than relying on the single [REDACTED] page.

6.2 Sealed court data issues

Sealed and confidential court records sit at the intersection of privacy statutes, judicial administrative rules, protective orders, and professional ethics. A vendor breach that implicates sealed material can provoke:

- Judicial administrative investigations or contract remedies beyond ordinary consumer PII claims;
- Heightened AG and legislative interest;
- Reputational theories that ordinary credit-monitoring offers do not cure (safety risks, doxxing of protected parties, compromise of sealed medical or abuse-related filings).

Oregon's Flynn quote is the political and media embodiment of this track.

6.3 Oregon / OJD posture

OJD's [REDACTED] release is unusually direct for a judicial branch vendor incident: public transparency "out of an abundance of caution," demand for vendor accountability, appellate-only scope clarification, and redirection of individual questions to the TR hotline and engagement number. Expect Oregon to remain a **message-discipline stress test** for any TR or court crisis script that sounds dismissive.

6.4 Ontario MAG + Canadian privacy (PIPEDA and provincial)

Ontario's joint statement places MAG in the operational loop from [REDACTED] onward and references consultation with Ontario government cybersecurity experts and the Cyber Security Division. Canadian response will be assessed under federal [REDACTED] principles (for appropriate private-sector custodians) and provincial public-sector / personal-health information regimes as applicable to court and ministry holdings. Exact statutory characterization of each data element and each custodian role is **fact-dependent** and should be mapped by Canadian privacy counsel; this brief does not invent that map. The public commitment to a **Canada-staffed** toll-free centre (active [REDACTED] per the statement) is itself a regulatory-optics move.

6.5 Securities disclosure — SEC / SEDAR considerations (flag carefully)

TRI is a widely held dual-listed issuer. Domestic US issuers evaluate cybersecurity incidents under **Regulation S-K** (). **As of this brief date, no confirmed** filing specifically for the **C-Track incident was located in open sources reviewed**. Separately, Thomson Reuters' SEC filings page reflects a pattern of current reports consistent with status — meaning counsel must **not** mechanically assert "TRI failed to file" without verifying (a) FPI status and applicable Canadian continuous-disclosure rules, (b) whether any 6-K/SEDAR disclosure already addresses the incident, and (c) materiality analysis under the issuer's governing regime. **Verify before asserting any securities-law violation**. Materiality inputs that boards will debate anyway: sealed-data exposure, multi-sovereign court customer impact, potential litigation and indemnity costs, and franchise risk to Legal Professionals trust — balanced against TR statements of no ops disruption and no fraud evidence, and against C-Track's likely limited direct revenue share (**unconfirmed**).

6.6 FTC / unfair or deceptive practices theories

For a vendor that markets secure court-management solutions to public institutions, plaintiffs and enforcers may explore unfair or deceptive acts theories regarding security representations, vendor diligence claims, and reasonableness of safeguards — especially given multi-month access before detection. These are **theories**, not filed actions, as of brief date.

6.7 HIPAA-adjacent fields

Notices list and **health insurance information** among possible fields. That does not automatically make West/TR a HIPAA covered entity or business associate for every record, but it does create **OCR curiosity risk** and state health-privacy overlays where medical exhibits or insurance identifiers appear in court files. Flag as , not as a confirmed HIPAA breach determination.

6.8 State AG risk in named jurisdictions

AGs in Alabama, Kentucky, Montana, Nevada, North Dakota, New Hampshire, Ohio, Pennsylvania, South Carolina, Tennessee, Wyoming, **Minnesota**, plus **District of Columbia** and territorial authorities in USVI, and Oregon's executive/legislative oversight ecosystem, all have political incentive to ask

whether vendors holding court data meet baseline security expectations. Multi-state AG coordination is a plausible mid-term development; **no multi-state AG settlement is reported as of brief date.**

7. Litigation & Liability Radar

7.1 Filing posture as of brief date

No widely reported named class action against Thomson Reuters / West Publishing over the C-Track incident was identified in open sources as of [REDACTED] PT. That is a **speed-to-file window** for plaintiffs and a **speed-to-retain window** for defense. Assume complaints can appear within days of mass notice and contact-center activation.

7.2 Likely tracks

1. **Consumer / privacy class actions** on behalf of persons whose SSN, DL, DOB, medical, or insurance data may have been in affected files — negligence, state consumer-protection statutes, state privacy acts where applicable, and unjust enrichment / declaratory relief packaging familiar from SaaS breach dockets.
2. **Securities / disclosure timing claims** (shareholder) — only if plaintiffs can plead materiality and a disclosure failure under the correct TRI reporting regime; **highly fact-dependent; no confirmed filing.**
3. **Court ↔ TR contract, indemnity, and notice-cost disputes** — including former-client [REDACTED] complications; demands for forensic transparency; possible termination or security-remediation covenants.
4. **Standing battles for litigants and “mentioned” persons** — especially where injury is alleged as increased risk, emotional distress, or sealed-record exposure without documented misuse (TR currently states no fraud/misuse evidence).

7.3 Structural analogues (not identical facts)

[REDACTED] (2020–2021): Vendor file-transfer product exploited; downstream customer breaches; Accellion later proposed an approximately [REDACTED] class settlement resolving claims against the vendor (public

settlement papers / HIPAA Journal reporting), while **customer-side** cases and settlements proceeded separately (e.g., [REDACTED]'s proposed customer-side settlement reported in the same coverage cycle). Structural lesson: **vendor and customer liability can bifurcate**, with separate funds, notice programs, and injunctive security covenants.

[REDACTED] (2023–): Massive MDL in [REDACTED] involving Progress Software and numerous customers; as of mid-2026 public summaries, claims against Progress remained in discovery while multiple **customer defendants** reached settlements (examples publicly reported: [REDACTED]; [REDACTED]; [REDACTED]; other defendants in the low-to-mid millions). Structural lesson: plaintiffs may sue **both** the platform vendor and institutional customers; settlements often feature multi-year credit monitoring, documented-loss reimbursement caps, and alternative cash payments.

Use these as **architecture parallels** for budget forecasting and settlement design — **not** as proof of C-Track damages quantum. C-Track's court-sealed-data profile is factually distinct from FTA/MOVEit file-transfer worm campaigns.

7.4 Defense themes

- **Standing / injury:** [REDACTED]
[REDACTED]
[REDACTED]
- **Contractual limitation of liability and indemnity allocation** [REDACTED]
[REDACTED]
- **Third-party doctrine / public records** [REDACTED]
[REDACTED]
- **Allocation of notice and credit-monitoring costs** [REDACTED]
[REDACTED]
- **Vendor vs. court hosting facts** [REDACTED]
[REDACTED]

8. Buyer Value Sections

8a. Defense counsel pitch + recommended immediate actions for THEIR clients

Pitch. This brief gives defense teams a board-ready factual spine on day one of public disclosure: verified timeline, court tracker, data categories, regulatory matrix, and analogue settlement architecture — without waiting for TR's final forensic report. Ideal buyers: national privacy/class-action defense firms; firms on TR's or West's panel; firms representing state court administrators or AG-adjacent risk units; insurance coverage counsel for cyber towers.

Recommended immediate actions for counsel's clients (one-time playbook — not a monitoring retainer):

1. **Preserve:** [REDACTED]
[REDACTED]
[REDACTED]
2. **Map contracts:** [REDACTED]
[REDACTED]
3. **Build the notice matrix:** [REDACTED]
[REDACTED]
4. **Sealed-record protocol:** [REDACTED]
[REDACTED]
[REDACTED]
5. **Standing memo:** [REDACTED]
[REDACTED]
[REDACTED]
6. **Coordination:** [REDACTED]
[REDACTED]
7. **Securities hygiene:** [REDACTED]
[REDACTED]

8b. Crisis PR pitch + messaging framework

Pitch. The story writes itself badly without discipline: "Thomson Reuters court records hack exposes [REDACTED]s and sealed files across America and Canada," amplified by a sitting chief justice calling the vendor breach unacceptable, against the awkward backdrop that Reuters newsrooms cover the world while the parent company's subsidiary is the vendor. Crisis teams that can separate **TR cloud/vendor failure** from **court network competence**, and that can handle the Flynn quote without attacking the judiciary, will win the mandate.

Messaging framework (draft pillars — counsel-reviewed before use):

1. **Empathy & duty:** [REDACTED]
[REDACTED]
2. **Facts over fear:** [REDACTED]
[REDACTED]
[REDACTED]

8c. Cyber IR / MSSP pitch + technical open questions / retainer scoping

Pitch. Court CIOs and MAG cyber units need independent validation that containment is real, that logging is adequate, and that sealed-data exfil pathways are understood. TR needs surge IR, cloud forensics, and customer-facing technical FAQs. MSSPs can sell a **scoped, finite** engagement: threat hunt, IAM review, CMS hardening verification, and board-level readout — sold as a project, not as this brief's aftermarket.

Technical open questions (publicly unanswered — scoping gold):

- Initial access vector (credential, API, vuln, insider, supply chain)?
UNKNOWN

- Identity of threat actor / ransomware vs quiet exfil? **UNKNOWN**
- Volume of files and unique data subjects? **UNKNOWN**
- Whether sealed objects were preferentially targeted? **UNKNOWN**
- Why detection required ~three months? Control gaps? **UNKNOWN**
- Which cloud service boundaries and shared-responsibility lines apply per court tenant? **Partially illuminated (Ohio vs Oregon/Ontario language differs)**
- Names of “outside experts” who validated remediation? **Not publicly identified**

Retainer / SOW scoping suggestions (finite): forensic timeline reconstruction; tenant-by-tenant data classification; sealed-corpus integrity checks; detection engineering for CMS admin planes; tabletop for next sealed-data incident; evidence packages for AG and court leadership. **Do not** bundle ongoing 48/72-hour “refresh” intelligence into this brief’s sale — this product is complete as delivered.

9. Decision-Maker Directory

Thomson Reuters / West / C-Track

Role	Name / channel	Notes
President & CEO	Steve Hasker	Public company CEO; strategic/reputation owner
President, Legal Professionals	[REDACTED]	Segment owner for court-tech / Westlaw adjacency (~[REDACTED] FY2025)
Chief Legal Officer / Company Secretary	[REDACTED]	Primary legal strategy / disclosure / privilege owner
Head of Investor	[REDACTED]	Investor Q&A; materiality

Role	Name / channel	Notes
Relations		narrative partner [REDACTED]
Incident hotline (individuals)	[REDACTED]	[REDACTED] per ND notice; engagement [REDACTED] US notice; [REDACTED] [REDACTED]
Incident website (US)	https://www.ctracknotification.com/	multiuse code [REDACTED]; enroll by [REDACTED] [REDACTED] TransUnion [REDACTED]
Incident website (Canada)	https://www.ctracknotification.ca/	(12 months); enrollment details pending [REDACTED] call-centre go-live
Media (incident)	mediarelations@ctracknotification.com	Per ND republished notice
CISO / Head of Security	Verify before outreach	Title holders rotate; do not cold-email stale names
Corporate communications	Verify via tr.com newsroom / incident media desk	Confirm before pitching

Court-side / government examples

Entity	Contact / lead example	Notes
[REDACTED] [REDACTED]	PIO [REDACTED] (laura.f.kerns@ojd.state.or.us ; [REDACTED] [REDACTED] per OJD release)	Flynn quote owner; appellate scope
Ontario courts / MAG	MAG + offices of Chief Justices Tulloch, Boucher, Nicklas	Canadian privacy & ops track

Entity	Contact / lead example	Notes
██████████ ██████████	Public Data Information page; court phone ██████████ listed for escalation	Hosting nuance; substitute notice
Other named judicial branches each row in §3	GC / CIO / State Court Administrator of	Primary court- side buyers

10. Peer Benchmark Appendix

Incident	Pattern	Publicly known outcome (high level)	Relevance to C-Track
██████████ ██████████ (2020–21)	Vendor product flaw → customer data theft	Accellion ██████████ vendor class settlement; separate customer settlements (e.g., ██████████ reported ██████████ \$5M proposal in contemporary coverage)	Vendor/customer bifurcation; injunctive security covenants
██████████ ██████████ (2023–)	Vendor vuln → mass customer breaches; MDL	Progress claims ongoing in discovery per mid-2026 summaries; customer settlements include NSC ██████████, Nuance ██████████, others	Multi-defendant MDL risk; monitoring + cash claim structures
Other gov-adjacent SaaS / transfer breaches	File transfer or CMS holding citizen data	Outcomes vary; often dual suits against vendor and agency/customer	Reinforces third- party victim / no- privity plaintiff pools

These benchmarks inform **process and structure**, not a damages calculator for sealed court records.

11. Cold Outreach Pack

*One-and-done sale of **this** brief. No refresh promises. No 48-hour or 72-hour update commitments.*

11.1 Defense / law firm

Subject: Thomson Reuters C-Track — court sealed-data breach brief (one-time)

Hi [Name],

[REDACTED]

[REDACTED]

[REDACTED]

Best,
[Sender]

11.2 Crisis PR / communications

Subject: Messaging brief: TRI C-Track court records incident (complete pack)

Hi [Name],

Your clients will get asked today whether “Thomson Reuters lost sealed court files.” The factual record is more precise — and more dangerous if mishandled: vendor/CMS locus, multi-jurisdiction variability, Flynn’s [REDACTED] quote, Ontario chief justices’ language, and a [REDACTED] contact-center surge.

[REDACTED]

Regards,
[Sender]

11.3 Cyber IR / MSSP

Subject: C-Track blast-radius intel for court / legal-tech IR scoping

Hi [Name],

Closing (product terms)

This document is a **one-time, paid executive intelligence deliverable**. It contains no commitment to 48-hour, 72-hour, weekly, or subscription updates. Buyers who need ongoing docket or disclosure monitoring should procure that as a **separate** engagement of their own design. Facts were compiled from public notices and reputable reporting cited above; unknowns are labeled rather than invented.

End of brief.
